Monthly Newsletter - April 2023

News and info

In April we received transmissions from the Super Dual Auroral Radar Network (SuperDARN) radar in the 20 m band. These transmissions, consisting of bursts with an approximate bandwidth of 4K50E, come, as shown by the KiwiSDR TDoA radiolocations performed by the SRAL (Finland) IARUMS Coordinator, Pekka, OH2BLU, from the NE of the Jyväskylä (FIN) area, close to Hankasalmi, the Finnish municipality where one of the transmitters of this radar network is located. These bursts were received from 14200 kHz CF up to 14335 kHz CF.

14200 kHz CF: SuperDARN radar. TDoA: NE of Jyväskylä (FIN); TDoA by the SRAL (Finland) IARUMS Coordinator, Pekka, OH2BLU,

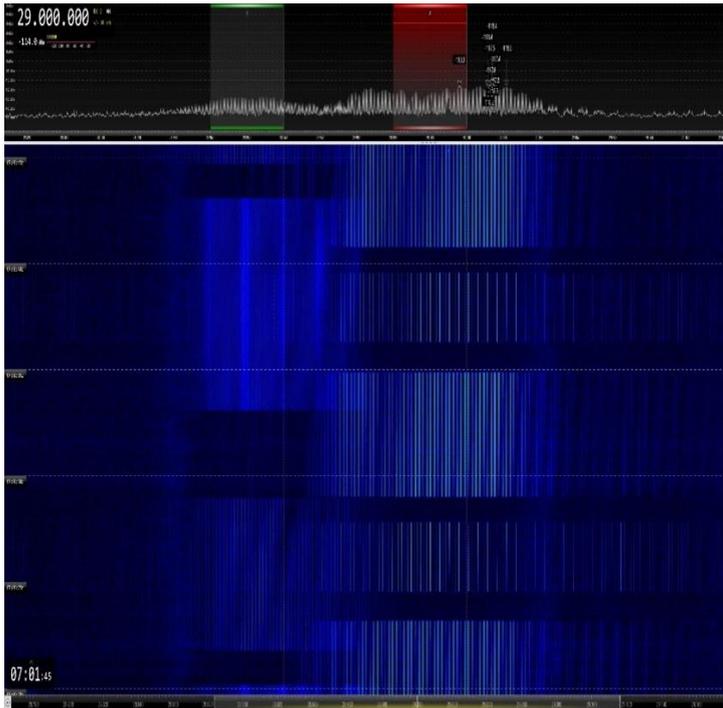

14200 kHz CF: Superdarn radar bursts. BW ca 4K5E. Bursts received also on 14305 kHz CF, 14320 kHz CF and 14335 kHz CF (see screenshot on the newsletter's last page).

The transmissions from this radar were received in addition to the sadly usual ones from other radars operating in the HF amateur radio bands that we receive every month for many years.

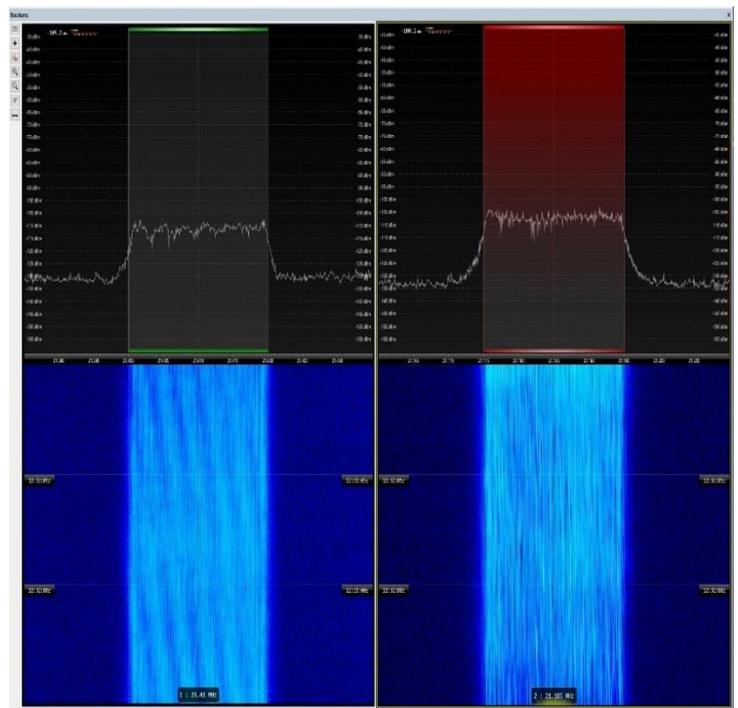

In April we highlight the transmissions sent in the 10 m band by the Iranian Over The Horizon (OTH) radar, very active during the last months, BW = 45K0E, alternating bursts of different sweep rates (150 and 313 sps; 307 and 870 sps), which we were able to receive operating on up to 3 frequencies simultaneously in this band.

The British OTHR located at the UK Sovereign Base Area in Cyprus was also received on this band on some occasions, as well as on the 15 m band, where it was most active, and on the 17 m band.

We also received numerous transmissions from Chinese OTH radars, sending short bursts (BW = 10K0E; 41.7, 50 or 66.7 sps) operating mostly on the 15 m bands, but also on the 17 and 20 m bands), as well as several transmissions from the OTH radar Contayner (RUS; BW = 12K0E; 40 sps), received on the 40, 20 and 15 m bands.

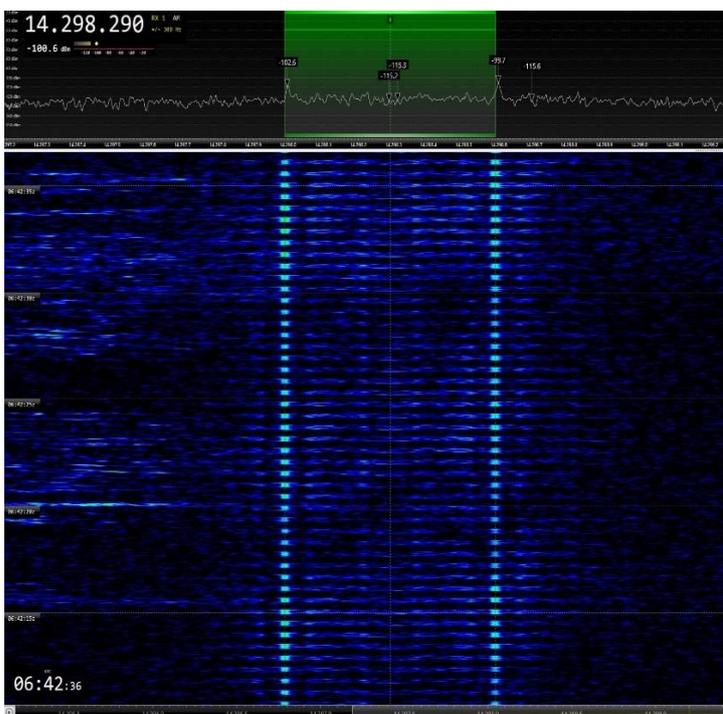

2 x OTHR IRN on 10 m (BW =45K0E): 28960 kHz CF (150 / 313 sps bursts and 29000 kHz CF (307 / 870 sps busts).

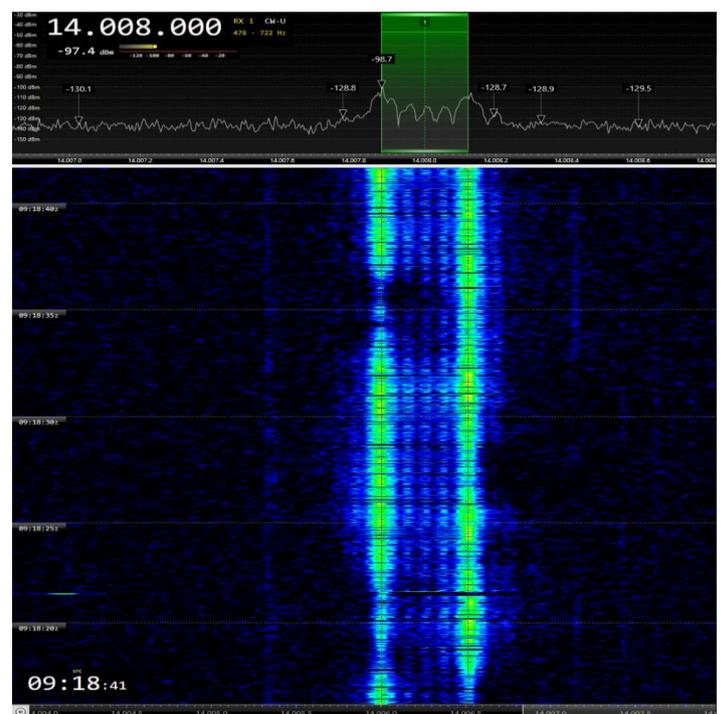

2 x OTHR G (UK SBA, Cyprus. BW = 20K0E; 50 sps): 21185 kHz CF and 21410 kHz CF.

Amongst the usually MIL modes received in the amateur HF bands, this month we often received F1B (FSK) transmissions sent in DPRK-FSK 600 ARQ mode (SH = 600 Hz; Bauds = 600) on 20 m and 15 m, along with other CIS## F1B modes, such as those on 7080 kHz CF (RUS; SH = 200 Hz; 50 Bd), 7162 kHz CF (SH = 250 Hz; 75 Bd) or on 14.0008 kHz CF (RUS, BW = 250 Hz, 50 Bd). We also received some CIS-12 (J7D; BW = 2K7E, 12 x 120 Bd + pilot line) on 40 and 20 m., as some LINK-11 CLEW DSB (B7D; BW = 6K0E, 75 Bd) and LINK-11 CLEW SSB (BW = 2K40E; 75 Bd) transmissions on 7159 kHz CF.

14298.29 kHz CF: DPRK-FSK 600 ARQ (F1B. SH = 600 Hz; Bd = 600)

14008 kHz CF: F1B. SH: 250 Hz; 50 Bd; RUS

The Spanish fishermen keep on frequently operating on 21000 kHz, J3E-U (USB). The DARC (Germany) IARUMS Coordinator, Daniel, DL3RTL, recently announced that the BnetzA had been involved in their monitoring.

Other pirates were received using SSB (J3E) on 40 m band (7055 kHz LSB, “Indonesian “village-radio”) and on the 10 m band (USB, J3E-U, Brazilian CBers) and F3E on the 10 m band (CBers and unidentified stations sending short traffic).

Detailed reports of national coordinators

Abbreviations used (as per IARUMS definitions)

aka = also known as | **BC** = Broadcast | **BD** = Baud, (or also Burst duration) | **BRI** = Burst repetition interval | **BW** = Bandwidth | **ca** = approximate | **CHN** = PRC = People’s Republic of China | **CF** = Center frequency | **DF** = Direction finding (radio location; see also TDoA) | **FMCW** = frequency modulated continuous wave | **FMOP** = frequency modulated on pulse | **OTHR** = over the horizon radar | **Radar** = if exact mode unknown | **SH** = Shift (Hz) | **sps** = sweeps per second | **TDoA** = Time difference of arrival | **ui** = **unid** = unidentified.
