Part 1: News and Infos

1. Chinese OFDM30 on 14 MHz

The Chinese system OFDM30 is very common on shortwave and of course on our bands, too.

Parameters: 30 x 60 Bd, shift 2200 Hz, pilot tone at 450 Hz AF – often operating on LSB.

Screenshot: DK2OM with Wavecom W-Code – OFDM30 on 14301.7 kHz on USB – daily active in December 2014

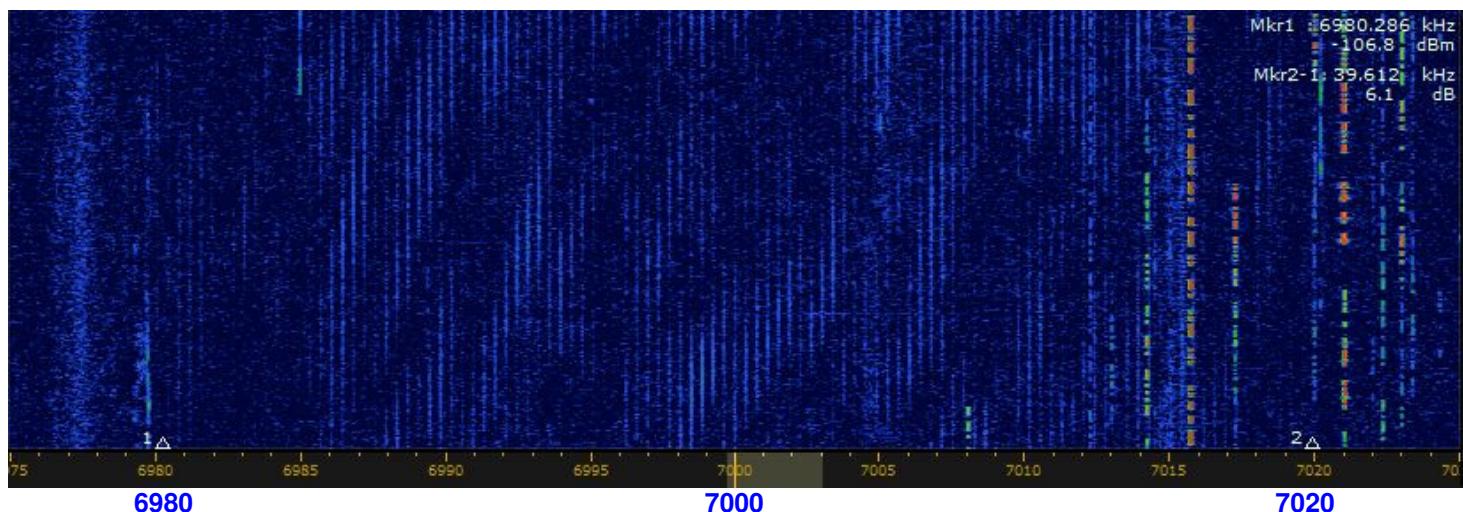

2. Ionosphere in December 2014

The MUF was rather high during the noons, often above 30 MHz. The F₂ layers were rather stable and often on 200 km altitude. In the early mornings and late evenings the MUF went down to 7 – 10 MHz. So we caught many intruders on our lower bands in the evenings. The following screenshot shows an example.

3. Iranian OTH radar on 7000 kHz

We found an OTH radar emission on 7000 kHz on Dec. 27th. Parameters: 375 sps (high as usual) and about 50 kHz wide. Bearings were showing Iran as expected. The signals were audible in whole Europe.

Screenshot: DK2OM with Perseus – Vertical lines: Spectral lines from the radar with 375 Hz increments

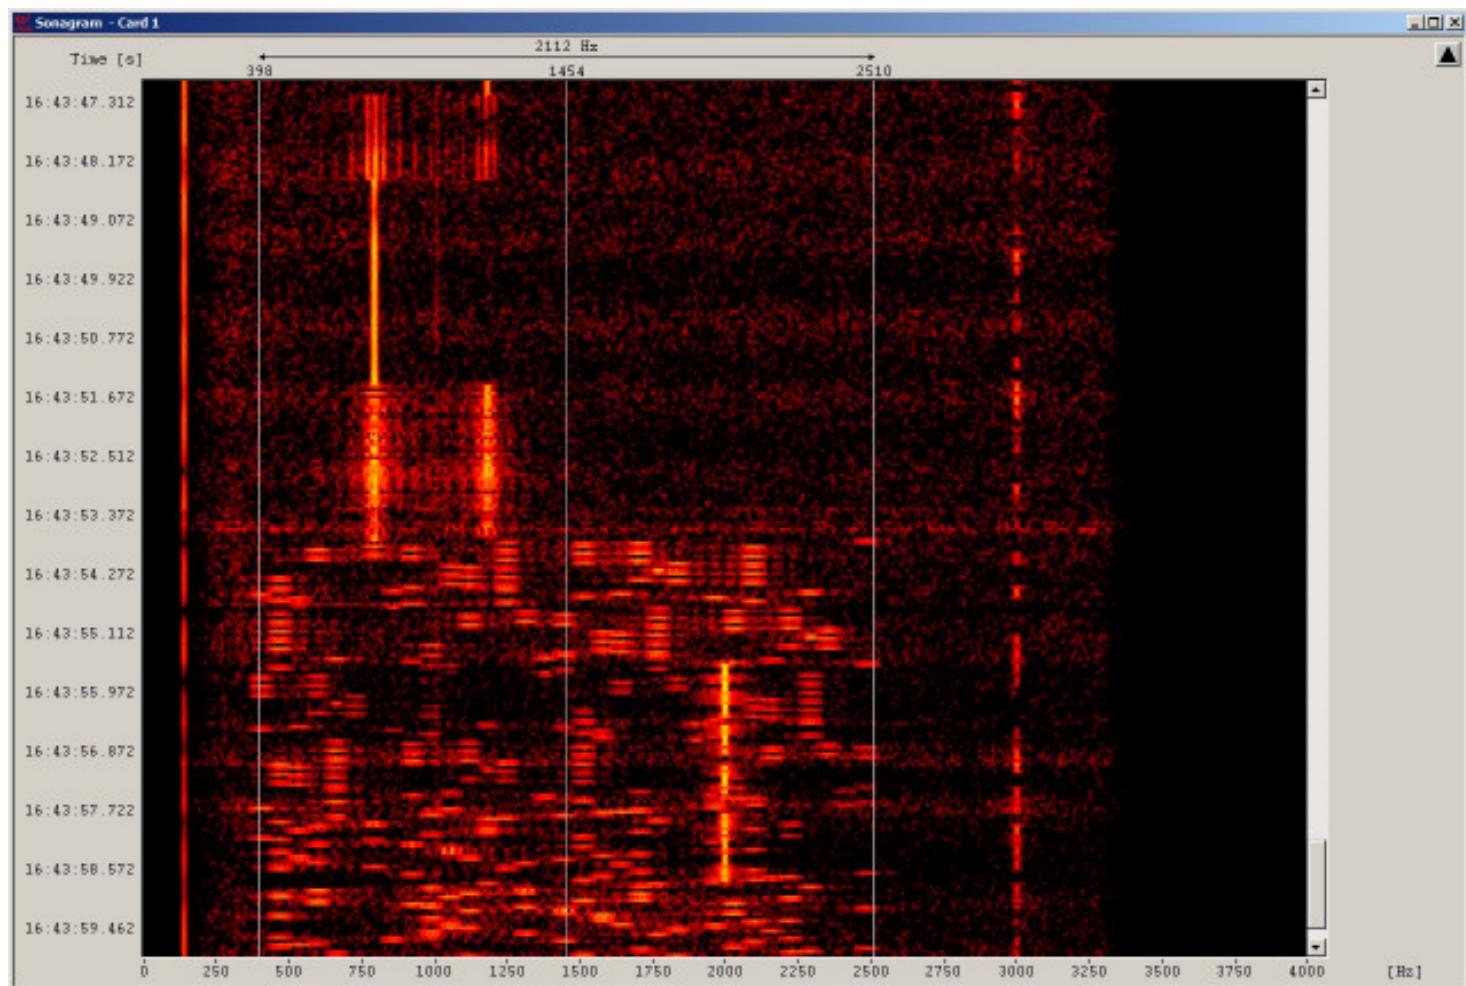

4. Pirates from Far East

Pirates from Philippines abused 14000 on USB daily. Indonesian pirates preferred 7000 on USB, daily too. Friends from Region 3 reported, that more bands and frequencies are crowded of pirates in Region 3.

5. Situation on 10 MHz-Band – legal operations

The 10 MHz-band is assigned on secondary base, as you may know. Checking the band from time to time will give you an interesting overview. The band is used by military services from Russia, Singapore, Tunisia, Algeria, Morocco, Malaysia and South Africa. The next screenshots shows the MFSK system “MHF50” from the South African Navy on 10116.5 kHz (center) with 54.3 Bd, 33 tones and shift 2120 Hz.

You can see an F1B-intro followed by MFSK tones. Screenshot: DK2OM with Wavecom W-Code – system “MHF50”

6. Taxi traffic on FM from Russia, Ukraine and Kazakhstan – not via E_s

Some people believe that the CIS taxi transmissions are audible via Sporadic E! This is an error. If you have some experiences on 50 MHz you may know, that the E_s conditions on 50 MHz are very unstable.

We get the CIS intruders by the stable F₂ layers as described above. Look for the links to 3 European ionosondes on our homepage. Observe the altitudes of F₂ layers and the MUF conditions!

Ionosondes on our homepage -> folder “Important Links”

Ionosondes:

[Ionosonde Juliusruh - Germany](#)

[Ionosonde Pruhonice - Czech Republic](#)

[Ionosonde Dourbes - Belgium](#)

7. Results of the past year 2014

The past year 2014 has been a hard year for all people, who like shortwave and Amateurradio (as usual). We were not only suffering from pirates. Emissions by PLC, Plasma TV and switching power supplies from LED lamps and other devices were often causing local interferences. Anyway we did not give up, and we will never give up to defend our bands!

Many thanks to all involved members, friends and concerned PTTs, especially the German PTT BNetzA, national societies and IARU!

ARSK MONITORING OVERVIEW FOR December 2014

Radio Hargeisha was not heard again on 7,120 or 7,130 kHz, and Uganda Radio on 7,195 kHz was heard only on one day. Unidentified intruders using KiSwahili (who may be military) on 7,000 kHz and others unidentified on 7,075 kHz were active as usual. There were also unidentified intruders using 7074 kHz.

E/H.M. Alleyne, 5Z4NU

ARSK National IARUMS Co-ordinator

ARSK – Kenya – 5Z4NU (Ted)
